### **REASON FOR ALLOWANCE**

1. Yoshida et al, Dienaz, Noma et al disclose a tire comprising at least one carcass-type reinforcement structure anchored on each side of the tire in a bead whose base is intended to be mounted on a rim seat, each bead extending radially outwards by a sidewall, the sidewalls radially outwardly joining a tread, the carcass-type reinforcement structure extending circumferentially from the bead to the sidewall, and a crown reinforcement, each of the beads further comprising a main anchoring zone shown at for attaching the reinforcement structure, the tire comprising in a radially outer position relative to the main anchoring zone a rim protector provided with a rubber projection extending in the region extending axially outwardly relative to the sidewall and comprising at least one secondary anchoring zone comprising a circumferential cord winding, the winding cooperating with an adjacent portion of a secondary reinforcement structure via a rubber anchoring mix, said anchoring zones being oriented substantially radially. Declercq discloses the use of adapters mounted between the beads of a tire and the bead seat of a rim to permit mounting of oversized tires on standard rims. However, none of the references of record suggests a tire wherein at least one secondary anchoring zone comprises a cord batch which includes circumferentially extending radially spaced cord portions cooperating with the second reinforcement portions via a rubber anchoring mix in the manner defined in the instant claims 1, 13 and 16 and in combination with other limitations of the claims. Therefore, claims 2, 4, 6-12, 14-15, depending therefrom, are considered to be allowable.
